Stepwise Procedure for Running the Sakshar Game Code

1 System Requirements

- Windows 7 and above

- Minimum 2 GB RAM

- In-built or external microphone

2 Software Requirements

- Microsoft VS Code (Download Here)

3 Installation Steps

1. Download the game code and supporting files from the GitHub repository (Refer to the attached image).

2. Extract the downloaded ZIP file.

3. Locate and open the text file named `requirements.txt`.

4. Note the required modules listed in the file.

5. Open the command prompt as an administrator.

6. Install the required modules one by one using the command:

    ```
    pip install "module name"
    ```

    Replace `"module name"` with the respective module mentioned in the file.

7. After completing the above steps, open the downloaded folder in VS Code (Ensure to open the entire folder, not a single file).

8. In VS Code, navigate to `main.py` and run it.

9. The game will start running on the system after a brief period (2-5 seconds). Refer to the VS Code documentation for running a Python file.
